

2W isolated DC-DC converter  
Fixed input voltage, unregulated single & dual output

Patent Protected

## FEATURES

- Operating ambient temperature range: -40°C ~ +105°C
- High efficiency up to 86%
- High power density
- Miniature SIP package
- I/O isolation test voltage 3K VDC
- No extra components required
- Industry standard pin-out
- IEC60950, UL60950, EN60950 approved

E\_S-2WR2 & F\_S-2WR2 series are designed for use in distributed power supply systems and especially suitable in applications such as pure digital circuits, low frequency analog circuits, relay-driven circuits and data switching circuits, where

- The voltage of the input power supply is relatively stable with a variation of ±10%Vin or less;
- A high input to output isolation voltage of ≤3000VDC is necessary;
- The requirement for a tight output regulation and low ripple & noise is not as strict.

## Design Reference

### 1. Typical application

Input and/or output ripple can be further reduced, by connecting a filter capacitor from the input and/or output terminals to ground as shown in Fig.3.

Choosing suitable filter capacitor values is very important for a smooth operation of the modules, particularly to avoid start-up problems caused by capacitor values that are too high. For recommended input and output capacitor values refer to Table 1.

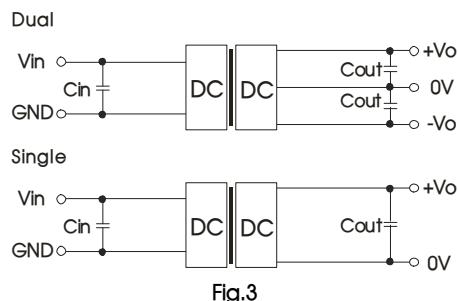

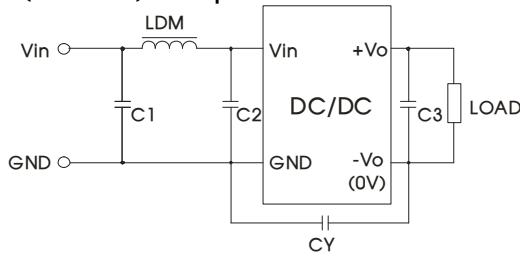

Table 1: Recommended input and output capacitor values

Vin (VDC)	Cin ( $\mu$ F)	Single Vout (VDC)	Cout ( $\mu$ F)	Dual Vout (VDC)	Cout' ( $\mu$ F)
5	4.7	3.3/5	10	$\pm 3.3 \pm 5$	4.7
12/15	2.2	9/12	2.2	$\pm 9 \pm 12$	1
24	1	15/18/24	1	$\pm 15 \pm 24$	0.47

Note: The capacitor value of the positive and the negative output are identical.

### 2. EMC (CLASS B) compliance circuit

EMI	Input voltage (VDC)	5/12/15	24
	C1/C2	4.7 $\mu$ F/50V	
	CY	--	1nF/3kV
	C3	Refer to the Cout in Fig.3	

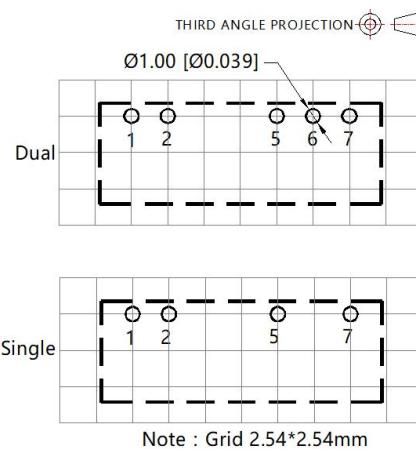

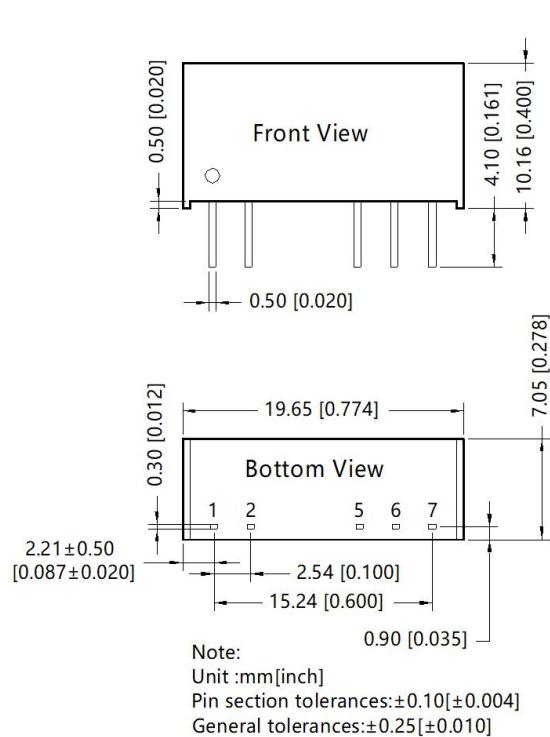

Note: For 24V input models, use a Y-capacitor CY of 1nF/3kV.

### 3. Minimum Output Load Requirement

For a reliable and efficient operation of the converter, the minimum load should never be less than 10% of the rated output load. If the total required output power is below 10%, a parallel bleeding resistor is required on the output, ensuring that the sum of the power consumption is always maintained at 10% minimum.

#### Notes:

- For additional information on Product Packaging please refer to [www.mornsun-power.com](http://www.mornsun-power.com). Packaging bag number: 58200001;
- In order to guarantee product performance and datasheet compliance, the product must be operated within specifications and load range requirement;
- The specified maximum capacitive load is tested under full load condition and over the input voltage range;
- All parameters in this datasheet were measured under following conditions: Ta=25 °C , relative humidity<75%RH, nominal input voltage and rated output load (unless otherwise specified);
- All index testing methods in this datasheet are based on our company corporate standards;
- For special requirements and customization service, please contact your nearest MORNUSN sales representative or one of our technicians;
- Products are related to laws and regulations: see "Features" and "EMC";
- Our products shall be handled according to ISO14001 and related environmental laws and regulations by qualified personnel only .
